

Applications are now open for the 2017 Cochlear Autumn School of Engineering.

Cochlear Autumn School of Engineering is an initiative organised by Engineers Australia, Sydney Division, 'Engineering' Universities and participating Rotary Clubs. The objective of the program is to give Sydney metropolitan area high school students a better understanding of what engineering is and how it works in everyday life.

The Cochlear Autumn School of Engineering will bring together 50 **Year 11 and 12 Students** from Sydney Metropolitan Area and who are facing choices which will influence their future careers.

Engineers cultivate creative, enquiring minds, a strong interest in mathematics, science and the environment, and want to contribute to improving the quality of life for everyone. Within each engineering discipline there are many career paths from management to research and teaching, from construction and maintenance to sales and marketing. Engineering is a prestigious profession and is essential for a nation's future development, creating wealth and employment which increases living standards throughout our societies.

Throughout the program the students will meet and interact with professional engineers employed by government, private companies, researchers and academics in a wide range of engineering disciplines. The students will attend lectures/demonstrations at participating NSW universities, and participate in industrial visits, providing students with the opportunity to see the different engineering disciplines at work.

Students may visit some the following universities during The Cochlear Autumn School of Engineering:

- University of Sydney
- University of NSW
- University of Technology, Sydney
- Macquarie University

In addition the students will visit three engineering sites (site tours) and attend a careers day with engineering professionals, providing the students with the ability to ask an engineer details questions to assist them in their future studies.
