

Join us for a weekly workshop program that will unlock your child's imagination by using a specially developed framework incorporating Plug & Play Electronics Hardware and Visual Programming using Click, Drag & Drop techniques.

Participants receive a complete and progressive learning tool giving them the opportunity to engage in learning in a fun way about real life engineering and robotics challenges without having to grapple with the complexities of discrete electronic component connection and soldering or complex programming language syntaxes.

No programming, engineering or robotics experience necessary! The only requirement is that participants know how to use a PC mouse to click, drag & drop.

All equipment provided

Session details:

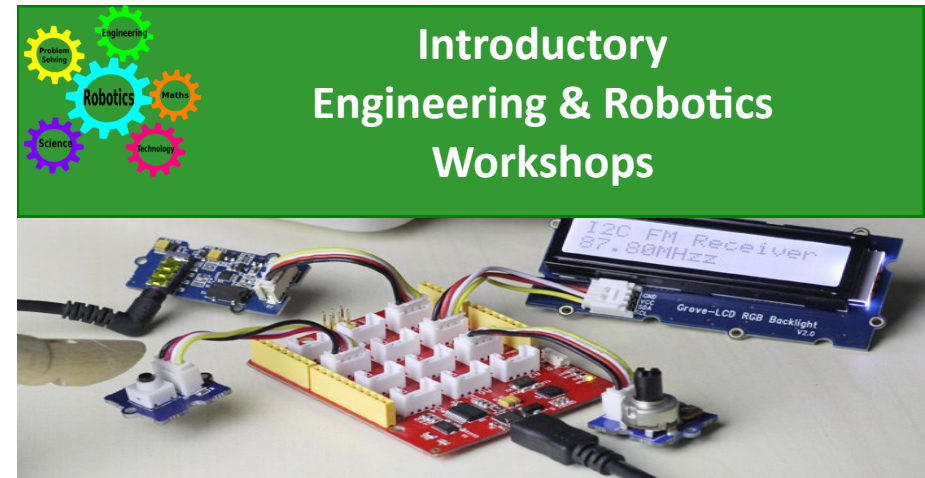

Thursday's from 5-6pm during school term

Bookings essential via Event-Brite at **\$25 per session.**

Scan the link on the left with your smart phone or text/SMS 0419 808 737 with your email details & we'll send you the link or go to our website for details.
